

Nutrition as a Key to Economic Development: The Case for Armenia

Diabetes mellitus

John P. Bilezikian, MD
Professor of Medicine
College of Physicians and Surgeons
New York, NY USA

OUTLINE OF PRESENTATION

- Epidemiology
- Morbidity, Mortality, Economics
- Risk Factors (selective discussion, not including genetics, smoking, excessive alcohol, drugs, etc)
 - Obesity
 - Lack of Exercise
- Complications (including skeletal health)
- Conclusions

Worldwide Estimates: 2012

- **366 million** people had diabetes in 2011; by 2030 this number is likely to rise to **552 million**
- The number of people with type 2 diabetes is **increasing** in every country
- **80%** of people with diabetes live in **low- and middle-income countries**
- The **greatest number** of people with diabetes are between **40 to 59** years of age

Worldwide Estimates: 2012

- **183 million people with diabetes are undiagnosed (50% of total with diabetes)**
- **Diabetes caused 4.6 million deaths in 2011**
- **Diabetes caused at least 465 billion US dollars in healthcare expenditures in 2011; 11% of total healthcare expenditures in adults (20-79 years)**
- **41% increase in expenditures vs 2007**

<http://www.diabetes.org/for-media/2013/annual-costs-of-diabetes-2013.html>

Global Impact

NORTH AMERICA AND CARIBBEAN

More healthcare dollars were spent on diabetes in this region than any other
1 in 10 adults in this region has diabetes

MIDDLE EAST AND NORTH AFRICA

1 in 9 adults in this region has diabetes
More than half of people with diabetes in this region don't know they have it

EUROPE

1 out of every 3 dollars spent on diabetes healthcare was spent in this region
21.2 million people in this region have diabetes and don't know it

WESTERN PACIFIC

1 in 3 adults with diabetes lives in this region
6 of the top 10 countries for diabetes prevalence are Pacific Islands

SOUTH AND CENTRAL AMERICA

Only 5% of all healthcare dollars for diabetes were spent in this region
1 in 11 adults in this region has diabetes

AFRICA

Over the next 20 years, the number of people with diabetes in the region will almost double
This region has the highest mortality rate due to diabetes

SOUTH-EAST ASIA

1 in 5 of all undiagnosed cases of diabetes is in this region
1 in 4 deaths due to diabetes occurred in this region

*all estimates are presented as comparative rates

The Top 10 Countries: Numbers of People with Diabetes (in Millions)

More than **371 million** people have diabetes.

TOP 10 COUNTRIES/TERRITORIES FOR PEOPLE WITH DIABETES (20-79 YEARS)

The Top 10 Countries: Prevalence

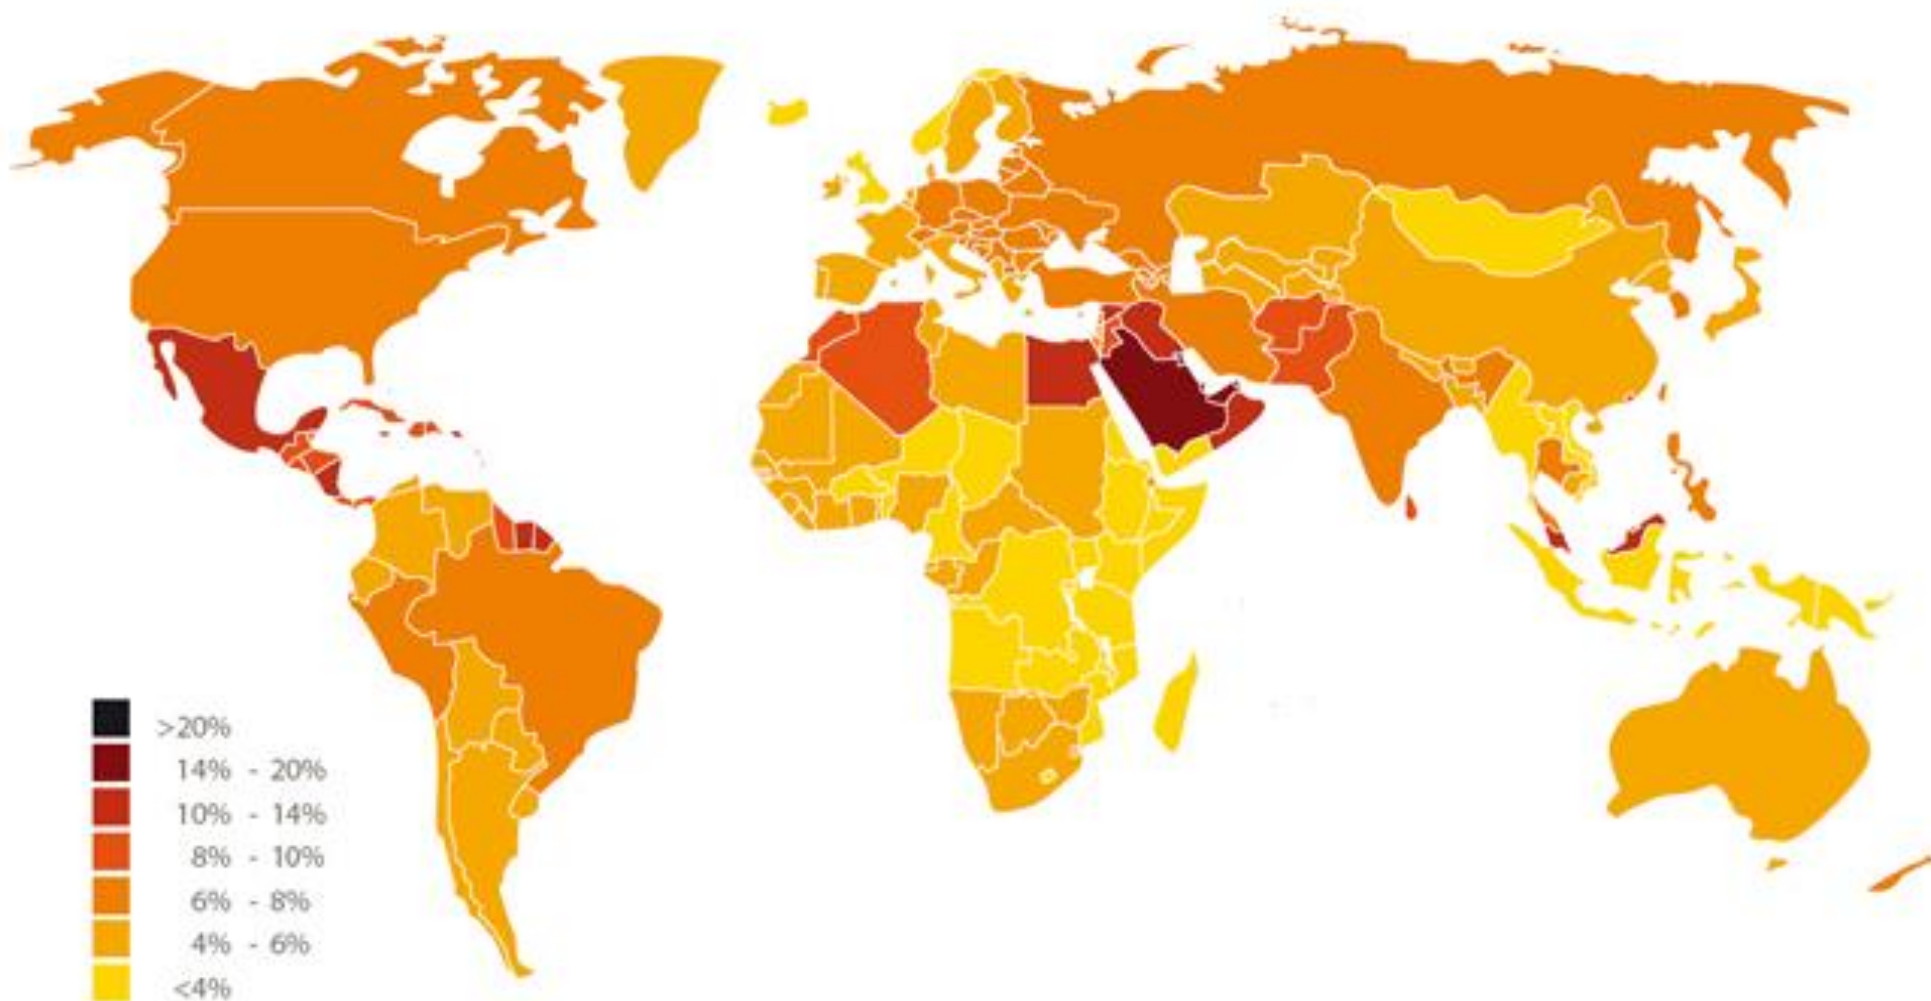

The number of people with diabetes is **increasing** in every country.

TOP 10 COUNTRIES/TERRITORIES FOR PREVALENCE* (%) OF DIABETES (20-79 YEARS)

COUNTRY /TERRITORY	PREVALENCE (%)
1 Federated States of Micronesia	37.2
2 Nauru	30.1
3 Marshall Islands	27.1
4 Kiribati	25.5
5 Tuvalu	24.8
6 Kuwait	23.9
7 Saudi Arabia	23.4
8 Qatar	23.3
9 Bahrain	22.4
10 Vanuatu	22.0

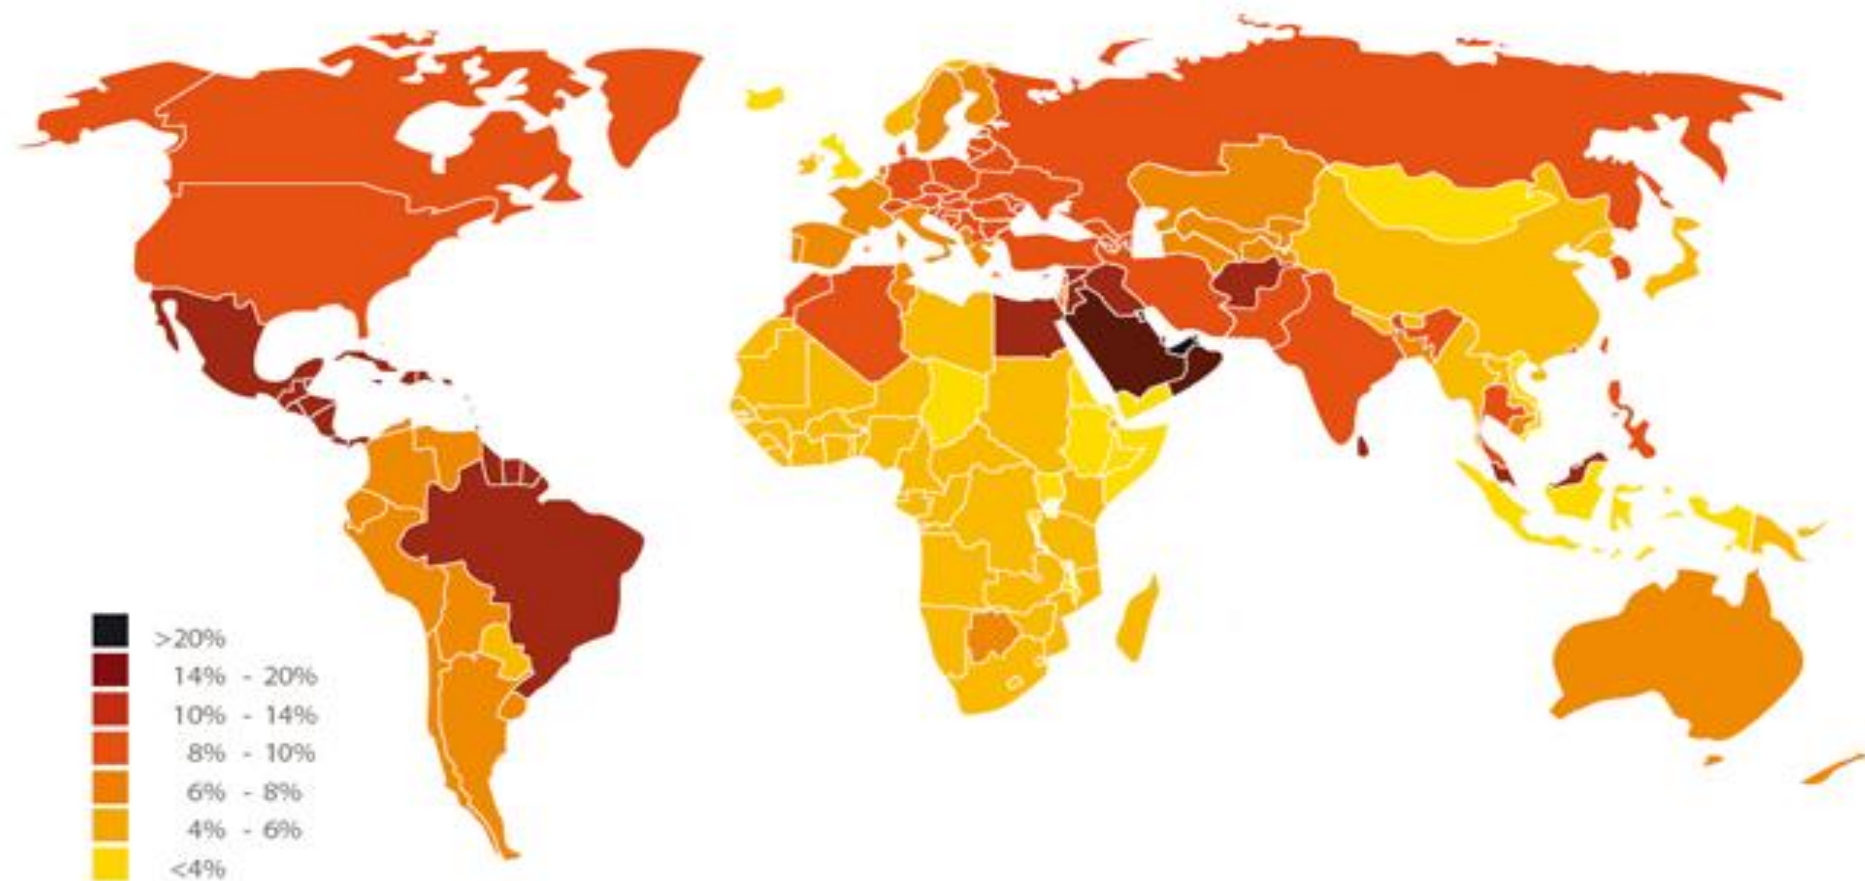

*comparative prevalence

Prevalence: Europe

Map 3.2. Prevalence* (%) estimates of diabetes (20-79 years), 2011, Europe Region

■ 52.6 million, or 8.1% of the adult population

Prevalence of diabetes in adults by age, 2013

Total cases: 54,950
Undiagnosed: 19,270

IDF, 2013

Diabetes in Armenia

(from AUA report, 2012)

- **Incidence: 3-fold increase over 10 years from 96.1/100,000 to 264.9/100,000**
- **Prevalence: increased from 1.3% to 2.06% over 10 years**
- **10% of the Armenian population will have diabetes by the year 2030!**

OUTLINE OF PRESENTATION

- Epidemiology
- **Morbidity, Mortality, Economics**
- Risk Factors (selective discussion, not including genetics, smoking, excessive alcohol, drugs, etc)
 - Obesity
 - Lack of Exercise
- Complications (including skeletal health)
- Conclusions

Diabetes in Armenia: Morbidity, Mortality, and Quality of Life (AUA report and IDF)

■ **Morbidity:**

- Among children: approximately 3-fold increase over 10 years
- Will increase by 0.9% yearly over the next 20 years

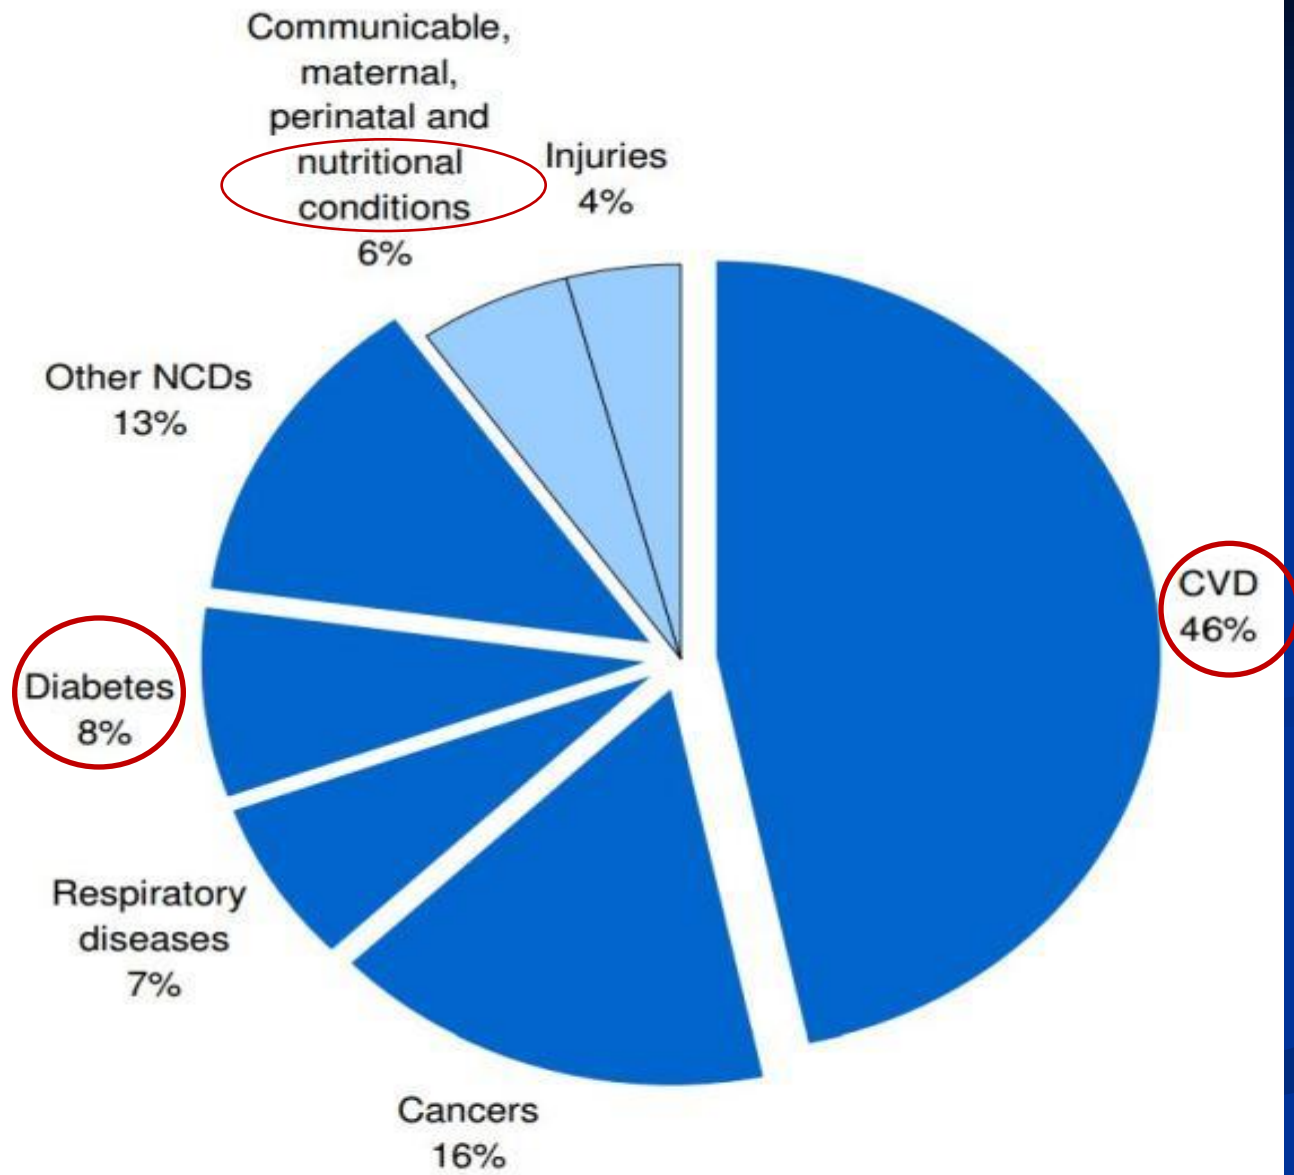

■ **Mortality:**

- Compared to Georgia: 4.6-fold higher (2009)

■ **Disability-adjusted life years**

- Compared to Georgia: 3-fold higher (2009)

Armenia: Leading Causes of Death, 2010

2010 total population: 3,092,072
Income group: Lower middle

NCDs are estimated to account for 90% of all deaths.

Spending for Diabetes Care and Deaths due to Diabetes: US- Armenia

Mean annual health care per person spent on diabetes care in Armenia: \$187 (USD)- from IDF, 2013 (About 1% of what the US spends!)

4.8 million people **died** and **471 billion USD** were **spent** due to diabetes in 2012.

HEALTHCARE EXPENDITURES AND DEATHS PER 1,000 DUE TO DIABETES BY INCOME GROUP

OUTLINE OF PRESENTATION

- Epidemiology
- Morbidity, Mortality, Economics
- Risk Factors (selective discussion, not including genetics, smoking, excessive alcohol, drugs, etc)
 - Obesity
 - Lack of Exercise
- Complications (including skeletal health)
- Conclusions

Risk factors for Diabetes

■ Three most important risk factors:

■ OBESITY

■ OBESITY

■ OBESITY

The Double Burden in Armenia

Under nutrition

Over nutrition

NOT JUST IN ARMENIA!

**1 Billion people in the world today are underweight
1 Billion people in the world today are overweight**

99 Million Americans are obese, 2011
165 Million Americans will be obese by 2030

Wang YC, et al. Lancet. 2011 Aug 27;378(9793):815-25.

Diabetes and Obesity
are parallel epidemics

The Growing Epidemic of Type 2 Diabetes in Relation to Obesity

Mokdad AH et al. *Diabetes Care*. 2000;23:1278-1283; Mokdad AH et al. *JAMA*. 1999;282:1519-1522; Mokdad AH et al. *JAMA*. 2001;286:1195-1200.

Diabetes and Obesity in the United States

- “In the U.S., one-third of adults and 16–18% of youth are obese, up from 5 to 6% three decades ago.
- Increases in rates of type 2 diabetes have closely followed the increases in obesity. In the U.S., diabetes affects 8.3% of the population, including 18.8 million with diagnosed diabetes and another 7 million who remain undiagnosed.”

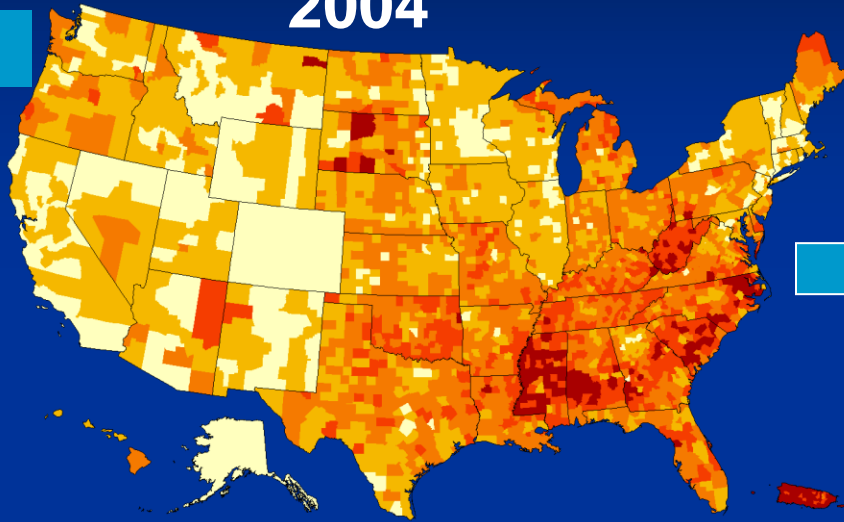

Estimates of Diabetes and Obesity among Adults aged ≥ 20 years: US

2004

2010

Diabetes

Percent

Obesity

Percent

CDC: Trends in obesity among children and adolescents aged 2–19 years, by sex: United States, 1971–1974 through 2009–2010

Armenian Children: Obesity

- **11% in 2005 to 15% in 2010**
- **After the Soviet Union, healthy school food canteens were transformed into school cafes with...**
 - **chips, burgers, hot dogs, buns, popcorns, soft drinks, crackers and candy bars**
 - **Lots of sweeteners and preservatives of little nutritional value**

1. Armenia Demographic and Health survey, 2010 <http://www.measuredhs.com/pubs/pdf/FR252/FR252.pdf>

Armenia: Metabolic Risk Factor Trends

2010 total population: 3,092,072

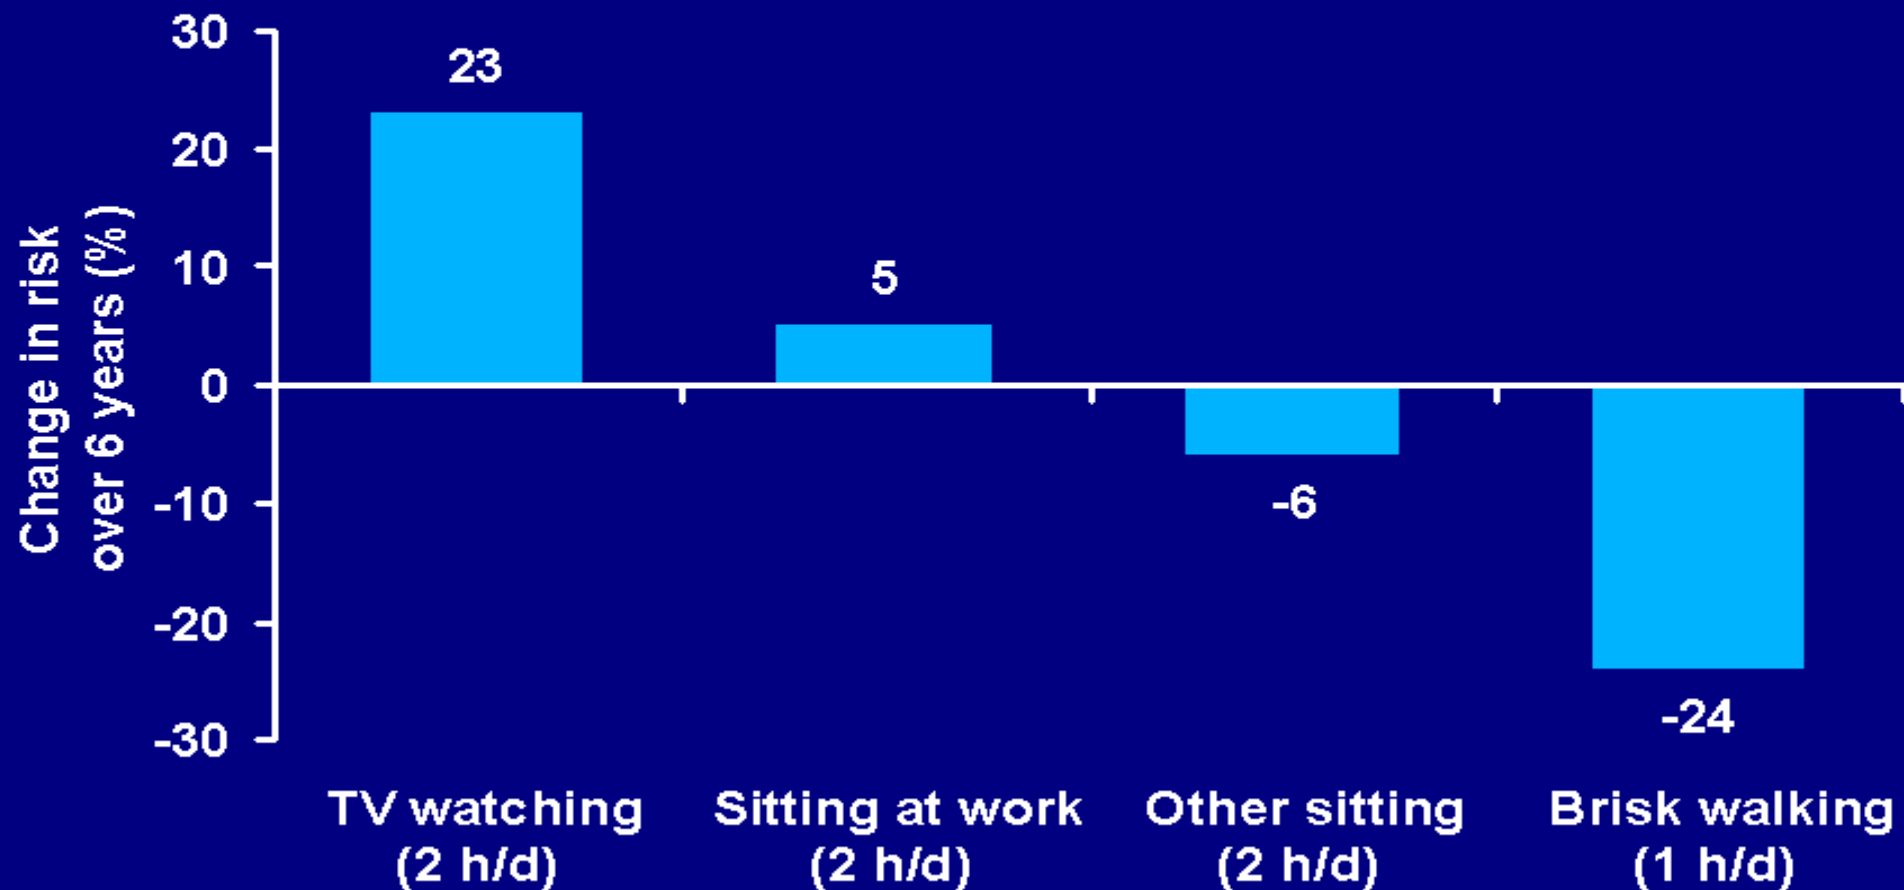

Income group: Lower middle

Risk factors for Diabetes

- **Important risk factors:**
 - OBESITY
 - **EXERCISE**

Television Watching and Risk of Obesity

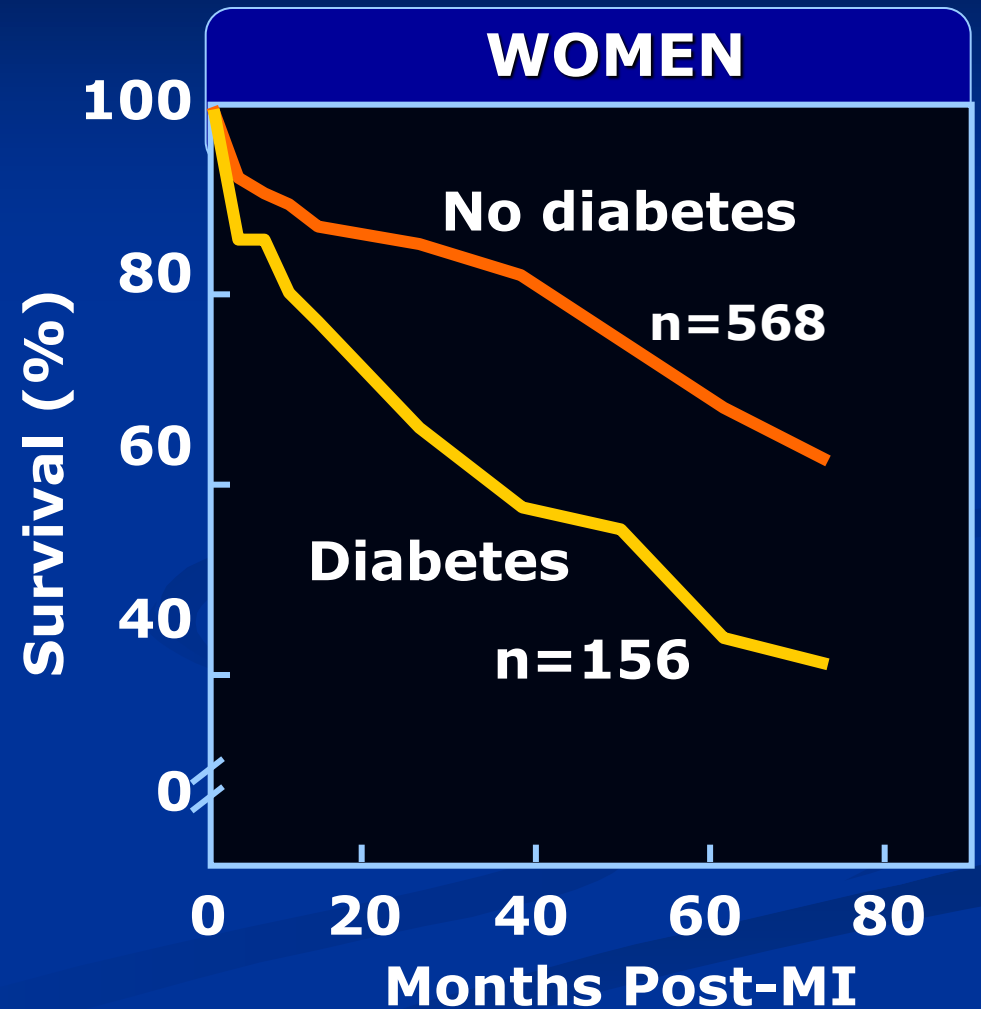

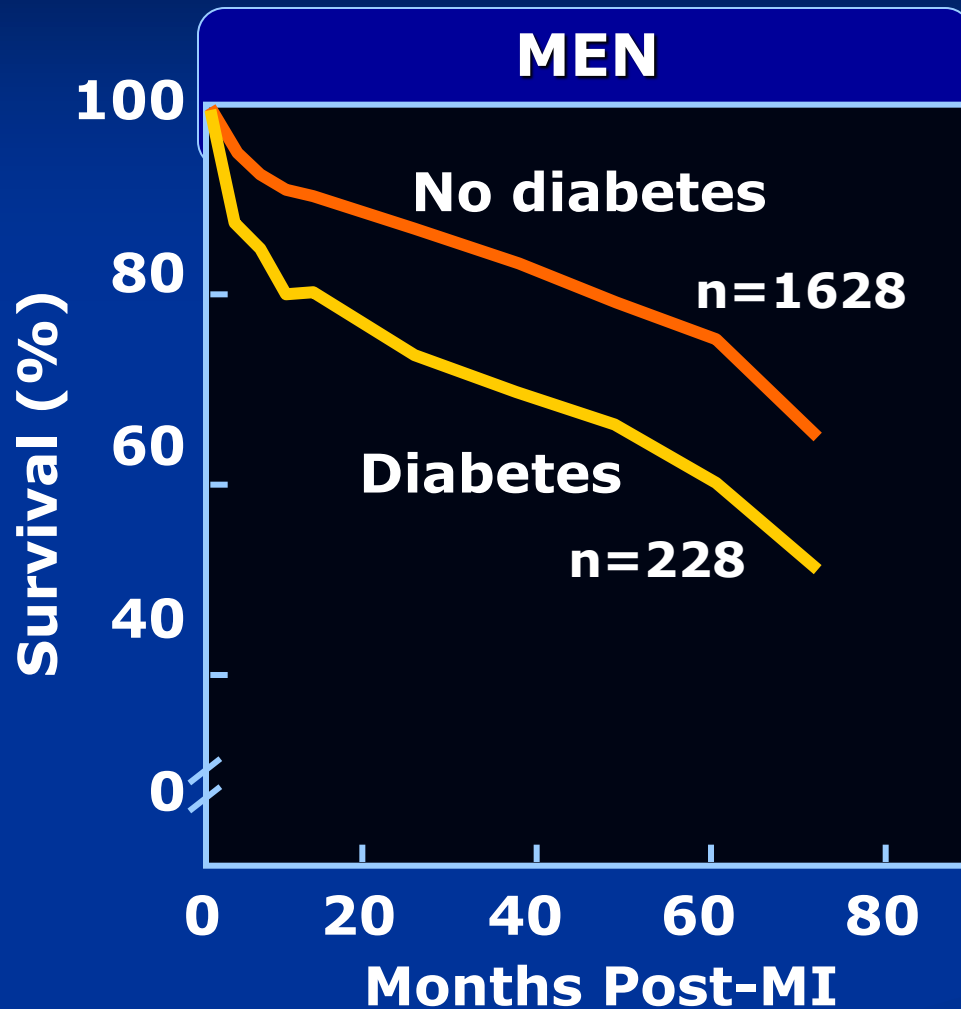

Complications of Diabetes Mellitus

- Besides morbidity and mortality statistics in Armenia, there are sparse individual data on specific complications of diabetes such as cardiovascular and peripheral vascular disease, eye disease, nephropathy, neuropathy etc.
- But data from other sources are compelling and clear

“Ticking Clock” Hypothesis

For	The “clock starts ticking”
Microvascular complications	At onset of hyperglycemia  An illustration showing three medical complications: a foot with three red arrows pointing to the toes, a pair of large, expressive eyes, and a cross-section of a kidney with a red arrow pointing to the renal artery.
Macrovascular complications	Before the diagnosis of hyperglycemia  An illustration of a pink heart with a yellow ECG line (heart rate monitor) overlaid on it, all contained within a pink square frame.

Survival Post-MI in Diabetic and Nondiabetic Men and Women: *Minnesota Heart Survey*

A “new” complication of Diabetes Mellitus: Osteoporosis

Risk factors for Osteoporosis

Not on most lists:

Type 2 Diabetes mellitus

A paradox: Type 2 Diabetes Mellitus should protect against osteoporosis

- **Protective Factors:**
 - **Average or higher BMD than age-matched controls**
 - **Greater weight in general**

Expectations of fracture risk in Diabetes Mellitus based upon bone mineral density

**Should be lower than age- and weight-
matched controls**

Type 2 Diabetes

- Expectation:
 - Lower Fracture Risk

but....

- Fracture risk is higher

Increased Fractures are at Multiple Sites in T2D

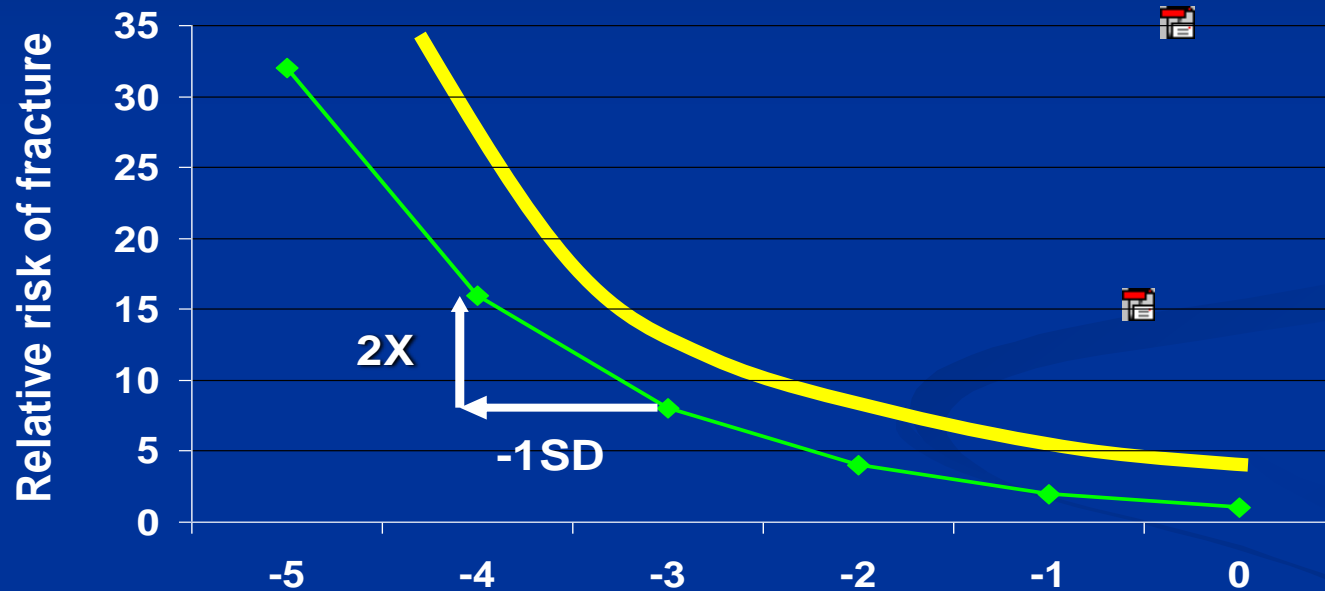

WHI (n=93,676; 7 years follow-up)

RR for fracture in T2D:

- Hip 1.41
- Foot 1.44
- Upper arm 1.30
- Ankle 1.34
- Spine 1.28
- Forearm 0.98

BMD Can Predict Fracture in T2D

But for a given T- score,
T2D will have a higher fracture risk

T score difference of 0.6 for same fracture risk

Moving forward...

- **Merging data with governmental policy and the realities of the situation in Armenia...**
- **The AUA Report, 2012**

Health in Times of Transition

Rapid Appraisal of Diabetes Care in Armenia

Qualitative Research

- **Scholarly review of government policies, implementation, results, and a blue print for further improvements in the diagnosis and care of Armenian patients with diabetes mellitus**
- **Survey of health care professionals and patients (n=91) in Yerevan and in Shirak marz (including Gyumri)**

AMERICAN UNIVERSITY OF ARMENIA
ՀԱՅԱՍՏԱՆԻ ԱՄԵՐԻԿԱՆ ՀԱՄԱԼՍԱՐԱՆ

■ Positive findings:

- Government policies have targeted diabetes for special attention
- Infrastructure for diabetes care exists
- Overall, there is a sufficient number of trained endocrinologists and other health care providers to meet the demand
- Insulin is distributed free as are some antidiabetic drugs
- Drugs are available to diabetes patients at the clinics
- Access to insulin is improved

AMERICAN UNIVERSITY OF ARMENIA
ՀԱՅԱՍՏԱՆԻ ԱՄԵՐԻԿԱՆ ՀԱՄԱԼՍԱՐԱՆ

❑ Negative findings:

- ❑ Health care providers are adequate but overly centered in Yerevan
- ❑ Short and inconstant supply of antidiabetic drugs
- ❑ Availability of antidiabetic drugs is not keeping up with the ever-changing landscape
- ❑ Expensive consumables (glucometers, strips, syringes, etc)
- ❑ Laboratory tests may not be available and are expensive
- ❑ Screening for complications are not routine

Is there reason to be optimistic?

- Government attention
- Dedicated professionals in Armenia and elsewhere are actively advocating for change

YES!

But, there is much work to be done

- Specific recommendations from AUA's task force
- The compelling argument to improve the situation

Shnorhagalutyun!
